SELECTED PROJECTS

Math Bearings mathbearings.com - Designed and shipped a production learning PWA around a pure deterministic core that owns curriculum, scheduling, and grading, with platform and storage behind ports at the edges. - Proved that boundary by reusing the same core unchanged across a React web app and a React Native portability tracer, with session assembly shared rather than reimplemented. - Made privacy and offline behavior tested properties rather than documented intentions: no learner data leaves the device, and a gate blocks diffs that contradict their declared data flow.	Offline-first learning PWA	PROJECT STACK TypeScript, React, Vite, service workers, IndexedDB, SQLite, Vitest, Playwright, Cloudflare Pages, GitHub Actions
My Four Sous Chefs myfoursouschefs.com - Built a full-stack TypeScript app that turns fridge, pantry, and shopping-list photos into personalized recipes and meal plans. - Implemented an image-to-ingredients pipeline with HEIC conversion, Sharp preprocessing, Tesseract OCR, Claude vision, and structured JSON parsing. - Added production controls for provider cost and abuse: Turnstile, identity-aware rate limits, daily quotas, token budgets, and atomic usage reservations with rollback.	Full-stack recipe SaaS	PROJECT STACK TypeScript, React 19, Vite, Express, Supabase, PostgreSQL, Stripe, Anthropic Claude, Sharp, Tesseract OCR, Cloudflare Turnstile, Vitest, Playwright

EXPERIENCE

Senior Front End Tech Lead

The Access Group (Paytronix Systems)

January 2023 – Present | Newton, MA

- Own front-end technical direction for the shared design system behind SaaS loyalty and engagement products, setting the React patterns, component standards, and release gates other teams build on.
- Led extraction of front-end applications from a legacy monorepo into Azure DevOps, improving deployment velocity and enabling clearer team ownership.
- Helped teams use coding assistants for scoped refactors and repetitive work, keeping verification and code review inside the normal delivery process.
- Set front-end standards, testing practices, and mentoring patterns across teams; recipient of the 2024 RARE Award.

Front End Software Developer

Paytronix Systems

July 2019 – January 2023 | Newton, MA

- Built and maintained React applications using Redux, Redux-Logic, Sass/CSS, and shared component patterns.

Quality Assurance Automation Engineer

Paytronix Systems

May 2016 – July 2019 | Newton, MA

- Maintained REST and Selenium-based automation frameworks, including scalable UI test solutions using RedwoodHQ.

Senior Software Quality Analyst

Bentley Systems

May 2007 – May 2016 | Mira Mesa, CA

- Led functional, integration, and regression testing across product suites; three-time Bentley Star Award recipient.

TECHNICAL SKILLS

FRONT-END PLATFORMS

TypeScript, JavaScript, React, Vite, SPA architecture, design systems, Sass/CSS, accessibility, performance

MODELS IN PRODUCTION

LLM APIs, vision workflows, structured responses, OCR, prompt design, cost controls, quotas, observability

QUALITY & DELIVERY

Testing strategy, Vitest, Jest, Playwright, CI/CD pipelines, Azure DevOps, technical mentoring

DATA, BILLING & OPERATIONS

Node.js, Express, REST APIs, Supabase, PostgreSQL, Stripe, webhooks, usage metering

EDUCATION

Bachelor of Science in CS

DeVry University
2005 – 2010

C# Programming Certification

University of California San Diego
2015 – 2016
